

Ivan Goncharov

Male, 47 years old

Date of Birth: May 28, 1979

Preferred contact method:

Phone: +7 (918) 565-52-34

Additional phone numbers:

- +7 (985) 520-30-82
- +7 (918) 565-52-34

Email: telepop.iv@gmail.com

Telegram: @telepopchik

GitHub: <https://github.com/ivan-telepop>

Personal Website: <https://ivan-telepop.github.io/#russ>

Location: Moscow, Russia

Citizenship: Russian Federation

Authorized to work in Russia.

Not willing to relocate. Available for occasional business trips.

Desired Position

Python Backend Developer

Additional specialization:

- Frontend Development (Next.js)

Employment Type

- Full-time
- Part-time
- Contract / Project-based

Work Format

- On-site
- Remote
- Hybrid

Preferred commuting time: No preference.

Professional Experience

Total Experience: 17 years 8 months

January 2026 – Present (6 months)

Uniservice LLC (Russia)

Low-Voltage Systems Engineer (Contract)

Industry:

- Residential Property Management
- Construction and Facilities Management
- Utility Services

Responsibilities

- Maintenance of low-voltage systems across a premium residential complex.

- Commissioning, configuration, and maintenance of Access Control Systems (ACS).
 - Administration and maintenance of IP intercom systems.
 - Maintenance of CCTV systems.
 - Maintenance of fire protection and building automation systems.
 - Equipment installation, commissioning, and technical support.
 - Maintenance of the AMR/AMI utility metering network throughout the residential complex.
-

November 2023 – May 2025 (1 year 7 months)

Orion LLC (Moscow)

Network Engineer

Company Activity

Digital services for residential property management.

Key Achievements

- Designed and deployed a monitoring system for MikroTik network devices.
- Developed an organizational approach for managing the company's data storage infrastructure.
- Configured and maintained a system for collecting electricity and heat consumption data.
- Developed a long-term network technology strategy.

Responsibilities

- Maintained the existing corporate network infrastructure.
- Resolved emergency network incidents.
- Investigated and analyzed failures in network equipment and infrastructure.

Technology Stack

- MikroTik
- Windows
- Linux
- VPN
- L2TP
- Docker
- Zabbix

May 2022 – November 2023 (1 year 7 months)

Veles LLC (Moscow)

Python Backend Developer

Company Activity

Construction, engineering, and software development for construction business processes.

Key Achievements

- Played a key role in designing the architecture of a SaaS platform.
- Selected the technology stack for the service.
- Designed and implemented user data storage along with OAuth2-based REST APIs.
- Built a staging environment for development and testing using GitLab CI/CD.
- Developed Docker Compose deployment configurations.

Responsibilities

- Participated in software architecture and business analysis.
- Created logical and architectural diagrams in Figma for team collaboration.
- Conducted code reviews.
- Prepared technical documentation.

Technology Stack

- Python
- FastAPI
- PostgreSQL
- Redis
- Kafka
- React / Next.js
- Docker

November 2021 – March 2022 (5 months)

AK LLC (Moscow)

Python Backend Developer

Company Activity

Development of the AUSN software platform.

Key Achievements

- Developed an XML/SOAP document parsing web service that converted data into JSON.
- Designed ORM models for the application's database layer.
- Developed Apache Airflow DAGs for ETL pipelines.
- Created Pydantic models to improve data validation and quality.

Responsibilities

- Participated in backend software development.
- Performed code reviews.
- Contributed analytical improvements focused on enhancing the user experience of the company's services.

Technology Stack

- Python
- FastAPI
- PostgreSQL
- Apache Airflow
- Logstash (ELK Stack)
- Docker

Professional Experience (Continued)

March 2019 – August 2021 (2 years 6 months)

PETKUS Rus LLC (Moscow)

Service Engineer

Company Profile

Sales, installation, maintenance, and servicing of grain storage, processing, and transportation systems.

Key Achievements

- Organized an efficient logistics process for delivering spare parts and equipment to customer sites.
- Provided technical guidance and on-site support during the assembly and commissioning of grain transportation systems.

Responsibilities

- Planned and coordinated technical tasks.
- Studied project documentation and scheduled field work.
- Traveled to customer sites for installation and support.
- Prepared technical and corporate reports.

Technologies and Equipment

- PETKUS Systems
 - Siemens
 - Bosch
-

January 2019 – February 2020 (1 year 2 months)

PETKUS Rus LLC (Moscow)

Service Engineer

Company Profile

Sales, installation, maintenance, and servicing of grain storage, processing, and transportation systems.

Key Achievements

- Organized an efficient logistics process for delivering spare parts and equipment to customer sites.
- Assisted installation teams during equipment assembly and commissioning.

Responsibilities

- Planned technical activities.
- Reviewed engineering documentation.

- Coordinated on-site work.
- Business travel to customer facilities.
- Corporate reporting.

Technologies and Equipment

- PETKUS Systems
 - Siemens
 - Bosch
-

March 2017 – August 2019 (2 years 6 months)

Milano Pizza & Sushi Restaurant Chain (Moscow)

CCTV Systems Engineer

Responsibilities and Achievements

- Designed and deployed the company's headquarters video surveillance system.
- Built a centralized monitoring video wall integrating 36 restaurants with systems ranging from 8 to 32 cameras each.
- Administered branch office local area networks.
- Organized equipment delivery, installation, and commissioning across multiple locations.
- Provided ongoing technical support for deployed systems.

Equipment

- Hikvision
-

January 2008 – March 2019 (11 years 3 months)

Self-Employed Software Developer

Entrepreneur / Freelance Software Engineer

Business Activities

Software development, web services configuration, custom website development, and business automation.

Key Achievements

- Developed a corporate website that significantly improved customer engagement.
- Created a sales-oriented Telegram bot for small businesses.
- Developed an AI-powered legal assistant bot trained to provide guidance on Russian civil rights legislation.
- Built a web service integrated with the iiko restaurant management system for business analytics and reporting.

Responsibilities

- Researching modern software technologies.
- Continuous professional development.
- Code reviews.
- Development of automation scripts and build pipelines.
- Payment gateway integrations.

Technology Stack

- Python
- Django
- PostgreSQL
- Celery
- Flower

Category B

About Me

I have more than 20 years of professional experience and continuously invest in expanding my technical expertise. I enjoy learning new technologies and applying them to real-world projects.

Over the years, I have developed a solid understanding of modern software engineering, computer science fundamentals, networking, and backend system architecture.

Personal Qualities

- Responsible and reliable.
- Strong work ethic.
- Analytical mindset.
- Fast learner.
- Comfortable solving complex and unconventional technical problems.
- Focused on writing maintainable and scalable software.

Core Technology Stack

- Python
- FastAPI
- Django
- Docker
- SQLAlchemy
- Relational and NoSQL databases

Additional Technical Skills

- React / Next.js
- GitHub Pages
- GitLab
- Pinecone

- OpenAI API
- LangChain
- MikroTik networking
- Linux
- macOS
- Windows

The technologies listed above reflect my practical, hands-on experience rather than theoretical knowledge. I continuously explore modern frameworks, tools, and architectural approaches to improve my professional skills.

Areas Where I Can Add Value

I am particularly interested in working on modern infrastructure and backend systems where software can automate business processes and improve operational efficiency.

Examples include:

- Data collection, storage, and processing.
- Business process automation.
- REST API development and system integrations.
- Enterprise reporting systems.
- Dashboard and frontend data delivery.
- Messenger, email, and notification services.
- Infrastructure monitoring platforms.
- Log aggregation and event processing.
- Telemetry and observability solutions.
- AI-powered monitoring systems.
- AI agent integration.
- Rapid MVP and prototype development.
- Custom backend solutions for non-standard business requirements.

I enjoy solving challenging engineering problems that require combining knowledge from multiple technical domains.

Professional Background

My career began in 2001 as an industrial equipment installation and commissioning engineer.

Over the years, I worked extensively with:

- Industrial automation systems
- CCTV systems
- Access Control Systems (ACS)
- Security systems
- Smart building technologies
- Computer networking

As my interests evolved toward software engineering, I gradually transitioned into backend development. I invested significant time in self-education, studying technical literature, building personal projects, and continuously improving my engineering skills.

This combination of practical engineering experience and software development enables me to understand both the physical infrastructure and the software systems that operate on top of it.

More information about my projects and professional experience is available on my personal website:
